

## Unit 7 – Solids

Graded Learning Targets	Supporting Learning Targets	Book
<p><b>LT 7.1</b> – <i>I can calculate surface area and volume of pyramids, cones, and spheres.</i></p>	<p>I can identify and use parts of solids to solve problems.</p> <p>I can model solids.</p> <p>I can find the surface area of a cone and pyramid and justify the formulae.</p> <p>I can find the volume of a cone and pyramid and justify the formulae.</p> <p>I can find the volume of a sphere.</p> <p>I can solve and justify problems using the relationship of volume, height, area of base, and radius algebraically.</p> <p>I can find the surface area of a sphere.</p>	<p>Section 1.8, 8.7, 10.1, 10.2, 10.3, 10.4, 10.5, 10.6, 10.7</p>
<p><b>LT 7.2</b> – <i>I can compose and decompose 3-dimensional figures to determine surface area and volume of various figures.</i></p>	<p>I can find the volume or surface area of a solid when a section is removed.</p> <p>I can find the volume or surface area of solids that are combined.</p> <p>I can find the volume and surface area of complex solids.</p>	<p>Section 8.7, 10.6</p>
<p><b>LT 7.3</b> – <i>I can explain and demonstrate the effect of scale factor on length, area, and volume.</i></p>	<p>I can describe the pattern between the length, area, and volume of a 2-D shape or 3-D solid.</p> <p>I can solve problems using the pattern of length, area, and volume of a 2-D shape or 3-D solid and justify my results.</p>	<p>Section 11.5</p>

## Unit 7 Conjectures

**LT 7.1** – *I can calculate surface area and volume of pyramids, cones, and spheres.*

Prism-Cylinder Surface Area Conjecture:

If  $B$  is the area of the base,  $P$  is the perimeter of the base, and  $H$  is the height of the solid, then the formula for the surface area of a prism or cylinder is  $SA = \underline{\hspace{2cm}}$ .

Pyramid-Cone Surface Area Conjecture:

If  $B$  is the area of the base,  $P$  is the perimeter of the base, and  $l$  is the slant height of the solid, then the formula for the surface area of a pyramid or cone is  $SA = \underline{\hspace{2cm}}$ .

Conjecture A:

If  $B$  is the area of the base of a right rectangular prism and  $H$  is the height of the solid, then the formula for the volume is  $V = \underline{\hspace{2cm}}$ .

Conjecture B:

If  $B$  is the area of the base of a right prism (or cylinder) and  $H$  is the height of the solid, then the formula for the volume is  $V = \underline{\hspace{2cm}}$ .

Conjecture C:

The volume of an oblique prism (or cylinder) is the same as the volume of a right prism (or cylinder) that has the same  $\underline{\hspace{2cm}}$  and the same  $\underline{\hspace{2cm}}$ .

Prism-Cylinder Volume Conjecture:

The volume of a prism or a cylinder is the  $\underline{\hspace{2cm}}$  multiplied by the  $\underline{\hspace{2cm}}$ .  $V = \underline{\hspace{2cm}}$ .

Pyramid-Cone Volume Conjecture:

If  $B$  is the area of the base of a pyramid or a cone and  $H$  is the height of the solid, then the formula for the volume is  $V = \underline{\hspace{2cm}}$ .

Sphere Volume Conjecture:

The volume of a sphere with radius  $r$  is given by the formula  $\underline{\hspace{2cm}}$ .

Sphere Surface Area Conjecture:

The surface area,  $SA$ , of a sphere with radius  $r$  is given by the formula  $\underline{\hspace{2cm}}$ .

**LT 7.3** – *I can explain and demonstrate the effect of scale factor on length, area, and volume.*

Proportional Areas Conjecture:

If corresponding sides of two similar polygons, the radii of two circles, or side lengths of two similar solids compare in the ratio  $\frac{m}{n}$ , then their areas compare in the ratio  $\underline{\hspace{2cm}}$ .

Proportional Volumes Conjecture:

If corresponding edges (or radii, or heights) of two similar solids compare in the ratio  $\frac{m}{n}$ , then their volumes compare in the ratio  $\underline{\hspace{2cm}}$ .
